EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering; CGPA: **9.31**

Bhopal, Madhya Pradesh

2023 – 2027

SKILLS

- **Concepts:** Data Structures, Algorithms, Distributed Systems, System Design, Concurrency, OOP
- **Frameworks/Tools:** Spring Boot, React, PostgreSQL, Redis, Docker, REST APIs, Git
- **Programming:** Go, Java, Python, C++, SQL (MySQL, PostgreSQL), NoSQL (MongoDB, Redis)

EXPERIENCE

Bharat Heavy Electricals Limited (BHEL)

Software Engineering Intern

May 2025 – Jun 2025

Noida, India (On-site)

MeetBook – Meeting Room Reservation & Management System

Tech Stack: Java, JSP, MySQL, Apache Tomcat

- Built an end-to-end meeting room booking platform with **3** user roles (Admin, Support, User), backed by a relational schema of **7+** tables for rooms, users, slots, reservations, and amenities in MySQL.
- Integrated a JSP-based frontend with a Java backend using DAO and MVC architecture, deployed on Apache Tomcat.
- Accelerated meeting room availability and booking efficiency by approximately **80%** through centralized, role-based scheduling.

PROJECTS

VelocityPay – Distributed Digital Wallet & Payment Platform

Go, PostgreSQL, Redis, Prometheus, Grafana

May 2026 – Jun 2026

GitHub

- Designed a digital wallet in Go that safely processes money transfers, using a **7**-step transaction pipeline with automatic rollback and a **10**-worker pool to handle multiple transfers at once.
- Integrated Redis idempotency keys with PostgreSQL transactions to eliminate duplicate payments, ensuring every payment is processed exactly once, even under heavy load.
- Enhanced transaction security with a fraud detection system of **5** rules that automatically flags and blocks risky activity, validated by **26** unit tests under concurrent use.

TrimIT – Scalable URL Shortening & Analytics Platform

Java, Spring Boot, Spring Security, PostgreSQL, MongoDB, Redis, JWT

Mar 2026 – Apr 2026

GitHub

- Built a URL shortening service with Base62-encoded short codes and custom alias support, securing access with JWT authentication and role-based permissions for User and Admin accounts.
- Transformed redirect performance by checking Redis before falling back to PostgreSQL, refreshing the cache automatically on every update to keep lookups fast and consistent.
- Limited login attempts to **5** per minute and URL creations to **20** per hour using Redis rate limiting, and stored click event data in MongoDB for analytics.

SynapseForce – Workforce Management System

Java, Spring Boot, React, PostgreSQL, Apache Tika, JWT, Docker

Jan 2026 – Mar 2026

GitHub

- Built an HR platform with separate admin and employee views using Spring Boot and React, connected to a PostgreSQL database and deployed on Render and Vercel.
- Designed an AI-based system that scores employees against project requirements across **3+** skill levels, and automatically assigns them to matching teams.
- Condensed manual data entry by adding automatic resume parsing that reads PDF/DOCX files and extracts skills, plus real-time notifications and messaging between HR and employees.

EXTRA-CURRICULAR ACHIEVEMENTS

- Finalist – Johns Hopkins University Health Hackathon, leading a team to the final round among 150 teams.
- Core Member of the Technical Team at Linux Club, actively contributing to workshops, events, and sessions.
- Co-Lead of the Event Management Team at D2C Igniters Club, handling event planning and coordination.
